

UI CASE STUDY

UI Design:

1. Authentication – Jobseeker Login:

The login experience is designed to create a strong first impression while maintaining clarity and trust. The left section focuses on aspirational messaging, highlighting career growth and platform credibility through testimonials and statistics, while the right section provides a clean and distraction-free login form. Users can easily switch between Jobseeker and Recruiter roles, ensuring flexibility within the same platform. The inclusion of social login options like Google and GitHub reduces friction and speeds up onboarding, making the process quick and intuitive.

The image displays a two-column UI design for the Hiredly login page. The left column, set against a dark blue background, contains aspirational messaging for jobseekers. It features the Hiredly logo at the top, followed by the text 'TRUSTED BY THE BEST' and the headline 'Architect your dream career.' Below this is a testimonial from Sarah Jenkins, a Software Engineer at NexaCorp, and statistics: '50k+ RECRUITERS', '1.2M CHALLENGES', and '94% SUCCESS RATE'. The right column, on a light blue background, is the login interface. It includes the Hiredly logo, a 'Welcome Back' message, and a prompt to 'Enter your credentials to access your workspace'. There are two tabs for 'Jobseeker' and 'Recruiter'. The login form consists of an 'EMAIL ADDRESS' field (with 'name@company.com' as a placeholder), a 'PASSWORD' field (with a 'Forgot Password?' link), and a 'Sign In' button. Below the form are social login options for Google and GitHub, and a link to 'Create Account' for users who don't have an account. At the bottom of the right column are links for 'PRIVACY POLICY', 'TERMS OF SERVICE', and 'HELP CENTER'.

2. Authentication – Recruiter Login:

This version of the login screen is tailored specifically for recruiters, with messaging that emphasizes precision hiring and data-driven talent acquisition. The tone is more professional and outcome-focused, reinforcing trust and efficiency. Clear call-to-actions and minimal input fields ensure a smooth login experience, while the option to apply for a recruiter account encourages new

users to onboard seamlessly. The layout maintains consistency with the jobseeker version while adapting content for a different audience.

3. Candidate Dashboard:

The candidate dashboard is designed to give users a clear overview of their progress and performance. It highlights key metrics such as completed tasks, overall performance score, and weekly progress, helping users stay motivated and goal-oriented. The inclusion of upcoming deadlines ensures users remain on track, while the leaderboard adds a competitive element to encourage engagement. Recent activity provides contextual feedback, making the experience feel dynamic and personalized.

4. Coding Challenges Listing

This page focuses on helping users explore and engage with technical challenges effectively. The layout uses a card-based system to present challenges with clear labels for difficulty, points, and participation. Filters such as difficulty level, language, and topic allow users to quickly find relevant tasks. The content emphasizes skill-building and real-world problem solving, making the platform feel valuable and career-focused. Strong call-to-actions like “Start Task” guide users toward immediate engagement.

5. Candidate Dashboard (Advanced Overview)

This version of the dashboard enhances personalization by welcoming the user and reinforcing their progress within the platform. It showcases performance insights, global ranking, and achievement tracking, creating a sense of accomplishment. The design balances analytical data with motivational elements, such as progress indicators and rankings, encouraging users to stay active and improve continuously.

6. Job Portal – Candidate Experience

The job browsing experience is designed to be intuitive and personalized. Users can filter opportunities based on job type, salary range, and preferences, making job discovery efficient. Each job card highlights key details such as role, company, salary, and match percentage, helping users make quick decisions. The “Skill Match” feature adds value by encouraging users to improve their visibility through assessments. The layout ensures clarity while maintaining a clean and modern visual hierarchy.
